DAFNE

DIODE LASER 808

The diode laser has an infrared beam that gives the best results with the least side effects. It produces a beam of light that is selectively absorbed by the melanin contained in the hair bulb, destroying it by a process called Selective Photo Thermolysis: the light energy is transformed into thermal energy, causing a real explosion of the cells of the hair bulb and the matrix, with the cancellation of the same.

PAINLESS

- RESULTS FROM THE FIRST SESSION
- SUITABLE FOR ALL PHOTOTYPES
- NO RISKS
- EFFECTIVE COOLING SYSTEM
